

PREFACE.....	IX
--------------	----

1 DISCRETE EUCLIDEAN SPACES 13

Introduction.....	13
The dimensional framework.....	14
<i>n</i> D-Discrete Euclidean Spaces.....	16
<i>n</i> -dimensional points.....	17
Definition of local DESs.....	18
Hierarchical organization of local DESs.....	19
Ascending and descending hierarchical organizations.....	19
Options of mathematical implementation.....	21
Isodimensionality and functionality.....	23

2 SCALES IN ND-DES'S 25

Introduction.....	25
Spatial scales.....	25
Classification of spatial scales.....	26
Classification according to the scope of the scale.....	26
Classification according to delimitations.....	27
Classification based on discretization patterns.....	27
Terminology in the context of scales.....	29
<i>n</i> D-DES structure design.....	31
<i>n</i> D-DES elements.....	33

3 NATURAL NUMBERS 35

Design of 1D discrete Euclidean spaces.....	35
1D-DES scalar labeling.....	36
Land of 0: a little mathematical tale.....	37
Scalar breakdowns.....	39
Definition of basic concepts.....	39
Natural numbers.....	43

4 DISCRETE SCALAR SEGMENT..... 45

Discrete infinite.....	45
Operations in the discrete segment.....	47
Extreme scalar indices.....	49
Minimal variation.....	50
Complementary scalar indices.....	51
Arithmetic with extreme scalar indices.....	52
Sets in the IDM.....	55
Infinite sets in the IDM.....	55

5	NUMERICAL SEQUENCES	59
	Introduction.....	59
	Numerical sequences and information	59
	Numerical information	60
	Numerical information quantity	61
	Sequence classification.....	62
	Classification by length.....	62
	Classification by numeric value	63
	Classification by non-evaluated NIQ.....	63
	Classification by evaluated NIQ	64
	Classification by positional information.....	66
	Quasi-terminal numerical sequences.....	66
	Decimal numerical sequences	68
	Valuation Methods	69
	Sequence representation	71
	Expansion of the number concept	72
6	DISCRETE LINE	73
	Introduction.....	73
	Arithmetic operations on the discrete line.....	73
	Adaptation of numerical sequences	74
	Sums and products	75
	Information in the results.....	77
	NIQ conservation laws	78
	Laws of numerical entropy.....	79
	Forced results.....	81
7	CONTINUUM NUMERICAL LINES	83
	Introduction.....	83
	Real numbers in the CM.....	84
	Real line approximations.....	86
	Axioms of existence	87
	Option of mathematical implementation A	87
	Option of mathematical implementation B	93
8	COUNTING NUMBERS	99
	Meta-numerical processes	99
	Counting natural numbers	101
	Obin's tests	102
	Obex's reflections	105
	The evidences of Obex	108

9	MATHEMATICAL CONCEPTUAL MODELERS ..	111
	Introduction.....	111
	Modelers of mathematical concepts	111
	Interaction among modelers.....	115
	Choice of modelers	117
	Infinite accessible and inaccessible	120
10	TOWARDS THE IDM DEVELOPMENT	123
	Introduction.....	123
	Real numbers in the IDM.....	123
	Fermat's little theorem	125
	Number Systems	127
	Conceptual discretization.....	130
	Discrete non-Euclidean metrics	132
	<i>INDEX</i>	135
